PokerStove

PokerStove is a highly hand optimized C++ poker hand evaluation library. The Win32 Hold'em GUI was first released in 2002, 9 and has been available as freeware since it's first release.

The core libraries of pokerstove are being open sourced. The project 9 is currently in the process of reviewing and publishing the code. As code is reviewed and code sanitized further commits 9 will be added.

Please find the old installer in the win32 directory. That installer should install a version of PokerStove which 9 will not expire at any time. You can also find the apk file for the Android version of the utility 9 in the android folder.

Libraries

peval

This is a c++ poker hand evaluation library. The main design goals of the library are generality, 9 extensibility, and ease of use. There are evaluators for fourteen variants of poker. Additionally, there are various card manipulation and 9 query tools built into the CardSet class.

Programs

A tool for poker hand evaluation. It demonstrates how to use the peval library, 9 and to create evaluators for the different variants of poker.

A utility for viewing colexicographical index for sets of cards.

Building

The pokerstove 9 libraries come with build scripts for cmake. This should allow you to build it on any platform with minimal tweaking. 9 This project has been successfully build under linux/g++, windows/vc2010 and OSX/XCode so far.

In order to build the libraries you'll need 9 the following installed on your platform of choice:

boost, version 1.46 or higher

cmake, version 3.14 or higher

Linux

To install the dependencies with 9 apt get:

apt-get install libboost-all-dev cmake

To build under linux using cmake, create a build directory, invoke cmake on the programs directory, 9 then build. The command below uses four threads, but you may set it according to your own system.

git clone https://github/andrewprock/pokerstove.git 9 cmake -DCMAKE_BUILD_TYPE=Release -S \. -B build cmake --build build --target all test -j 4

You should then be able to execute 9 the simple command line example:

pokerstove/buildR$ ./bin/ps-eval Allowed options: -? [--help] produce help message -g [--game] arg 9 (=h) game to use for evaluation -b [--board] arg community cards for he/o/o8 -h [--hand] arg 9 a hand for evaluation -q [--quiet] produce no output For the --game option, one of the follwing games 9 may be specified. h hold'em o omaha/8 O omaha high r razz s stud e stud/8 q stud high/low no 9 qualifier d draw high l lowball (A-5) k Kansas City lowball (2-7) t triple draw lowball (2-7) T triple draw 9 lowball (A-5) b badugi 3 three-card poker examples: ps-eval acas ps-eval AcAs Kh4d --board 5c8s9h ps-eval AcAs Kh4d --board 5c8s9h 9 ps-eval --game l 7c5c4c3c2c ps-eval --game k 7c5c4c3c2c ps-eval --game kansas-city-lowball 7c5c4c3c2c

Windows

Getting boost to work under windows can be a 9 bit of a challenge. One of the easier ways is to install precompiled librares. There is a batch of them 9 available at sourceforge. If you're working with Visual Studio 2010, you will probably need the 32 bit libraries. [boost precomplied 9 libraries] (http://sourceforge/projects/boost/files/boost-binaries/1.53.0/)

Under windows, the cmake gui can be used to construct solution and project files for Visual Studio 2010. To 9 do this, browse source to locate the programs directory git/pokerstove/programs. Then create a build dir for the project. At the 9 bottom of the gui click Configure, then Generate. You may have to edit the git/pokerstove/programs/CMakeLists.txt to point cmake to your 9 installation of boost.

Once you've done that, you should be able to select

Menu->Build->Build Solution

to build the sample program.

OSX

In order to build 9 under Max OSX, you'll need to install XCode, git, cmake, macports, and boost. The first four can be installed in 9 the conventional manner, with XCode coming form the App Store, cmake, git and macports downloaded from the web. The macports 9 package is a typical unix package management utility and is required to install boost. Once you've installed and selfupdate'd macports, 9 you can install boost:

sudo port install boost -no_static

Or

brew install boost cmake

From there you can run the cmake gui as in 9 windows. This will create an XCode project which should compile the sample utility. Alternatively, follow the command line cmake instructions 9 in the Linux section.

Python support

Python support is done via swig integration. This has only been developed and tested for Ubuntu 9 at this point in time.

In order for python libraries to work, you will need to install:

sudo apt install python3 swig

If 9 you would like to also build the Python library as well, append the directive when the first cmake invocation is 9 run:

cmake -DCMAKE_BUILD_TYPE=Release -S \. -B build -DBUILD_PYTHON=ON

Once you have built the project with Python support there will be a python 9 loader file and a shared object file. To test run the script from the build directory:

PYTHONPATH=python/pokerstove/pyPeval/ ../src/lib/python/test-python

For regular use you'll 9 want to export the PYTHONPATH variable to your shell:

Resumo: Líder político do Hamas, Ismail Haniyeh, supostamente assassinado no Irã

A notícia do suposto assassinato do líder político do Hamas, Ismail Haniyeh, no Irã é uma violação grave da soberania iraniana e da suposta bolha de segurança da capital iraniana. Embora Israel não tenha reivindicado a responsabilidade pelo ataque, tem prometido eliminar o Hamas e seus líderes após os ataques de 7 de outubro. O Irã já havia enfrentado violações semelhantes no passado, como o assassinato de seu cientista nuclear proeminente, Mohsen Fakhrizadeh, pokersnowie pokerstars 2024, e o ataque à base militar remota dos EUA após o assassinato do comandante da Força Quds, Qasem Suleimani.

Tabela: Linha do tempo dos eventos recentes

Data	Evento
7 de outubro de 2024	Ataques do Hamas contra Israel
15 de março de 2024	Israel afirma ter atacado Beirute, matando um comandante militar proeminente do Hezbollah
16 de março de 2024, às 2h (5h30min ET)	Suposto assassinato de Ismail Haniyeh pokersnowie pokerstars Teer

Lista: Possíveis respostas do Irã

- Ataque assimétrico e furtivo pokersnowie pokerstars semanas ou meses
- Ação limitada contra alvos remotos
- Evitar uma resposta imediata

O risco do território inexplorado atualmente é que a gravidade das respostas esperadas não está definida, e que as ações podem ser tomadas por motivos egoístas ou insulares pokersnowie pokerstars vez de um impacto regional maior. O líder supremo do Irã, Ali Khamenei, está provavelmente projetando força tanto internamente quanto externamente ao ameaçar uma "dura punição" a Israel.
