Card game

"Poker player" redirects here. For the magazine, see *Poker Player*

A game of

Texas hold 'em in progress. "Hold 'em" 7 is a popular form of poker.

Poker is a family of

comparing card games in which players wager over which hand 7 is best according to that specific game's rules. It is played worldwide, but in some places the rules may vary.

7 While the earliest known form of the game was played with just 20 cards, today it is usually played with 7 a standard deck, although in countries where short packs are common, it may be played with 32, 40 or 48 7 cards.[1] Thus poker games vary in deck configuration, the number of cards in play, the number dealt face up or 7 face down, and the number shared by all players, but all have rules that involve one or more rounds of 7 betting.

In most modern poker games, the first round of betting begins with one or more of the players making some 7 form of a forced bet (the blind or ante). In standard poker, each player bets according to the rank they 7 believe their hand is worth as compared to the other players. The action then proceeds clockwise as each player in 7 turn must either match (or "call") the maximum previous bet, or fold, losing the amount bet so far and all 7 further involvement in the hand. A player who matches a bet may also "raise" (increase) the bet. The betting round 7 ends when all players have either called the last bet or folded. If all but one player folds on any 7 round, the remaining player collects the pot without being required to reveal their hand. If more than one player remains 7 in contention after the final betting round, a showdown takes place where the hands are revealed, and the player with 7 the winning hand takes the pot.

With the

exception of initial forced bets, money is only placed into the pot voluntarily 7 by a

player who either believes the bet has a positive expected value or who is trying to bluff other 7 players for various strategic reasons. Thus, while the outcome of any particular hand significantly involves chance, the long-run expectations of 7 the players are determined by their actions chosen on the basis of probability, psychology, and game theory.

Poker has increased in 7 popularity since the beginning of the 20th century and has gone from being primarily a recreational activity confined to small 7 groups of enthusiasts to a widely popular activity, both for participants and spectators, including online, with many professional players and 7 multimillion-dollar tournament prizes.[2]

History [ edit ]

While poker's exact origin is the subject of debate, many game scholars point to the 7 French game Poque and the Persian game As-Nas as possible early inspirations.[3] For example, in the 1937 edition of Foster's 7 Complete Hoyle, R. F. Foster wrote that "the game of poker, as first played in the United States, five cards 7 to each player from a twenty-card pack, is undoubtedly the Persian game of As-Nas." However, in the 1990s the notion 7 that poker is a direct derivative of As-Nas began to be challenged by gaming historians including David Parlett. What is 7 certain, however, is that poker was popularized in the American South in the early 19th century, as gambling riverboats in 7 the Mississippi River and around New Orleans during the 1830s helped spread the game. One early description of poker was 7 played on a steamboat in 1829 is recorded by the English actor, Joe Cowell. The game was played with twenty 7 cards ranking from Ace (high) to Ten (low).[4]

In contrast to this version of poker,

seven-card stud only appeared in the 7 middle of the 19th century, and was largely spread by the US military.[5] It became a staple in many casinos 7 following the second world war, and grew in popularity with the advent of the World Series of Poker in the 7 1970s.[6]

Texas hold 'em and other community card games began to dominate the gambling scenes over the next couple of decades. 7 The televising of poker was a particularly strong influence increasing the popularity of the game during the turn of the 7 millennium, resulting in the poker boom a few years later between 2003 and 2006. Today the game has grown to 7 become an extremely popular pastime worldwide.

Gameplay [ edit

]

Further information on betting rules: Betting in poker

In casual play, the right 7 to

deal a hand typically rotates among the players and is marked by a token called a dealer button (or 7 buck). In a casino, a house dealer handles the cards for each hand, but the button (typically a white plastic 7 disk) is rotated clockwise among the players to indicate a nominal dealer to determine the order of betting. The cards 7 are dealt clockwise around the poker table, one at a time.

One or more players are usually

required to make forced 7 bets, usually either an ante or a blind bet (sometimes both).

The dealer shuffles the cards, the player on the 7 chair to their right cuts, and the dealer deals the appropriate number of cards to the players one at a 7 time, beginning with the player to their left. Cards may be dealt either face-up or face-down, depending on the variant 7 of poker being played. After the initial deal, the first of

what may be several betting rounds begins. Between rounds, 7 the players' hands develop in some way, often by being dealt additional cards or replacing cards previously dealt. At the 7 end of each round, all bets are gathered into the central pot.

At any time

during a betting round, if one 7 player bets, no opponents choose to call (match) the

bet, and all opponents instead fold, the hand ends immediately, the bettor is awarded the pot, no cards are required to be shown, and the next hand begins. This is what makes bluffing possible. Bluffing is a primary feature of poker, distinguishing it from other vying games and from other games that use poker hand rankings.

At the end of the

last betting round, if more than one player remains, there is a showdown, in which the players reveal their previously hidden cards and evaluate their hands. The player with the best hand according to the poker variant being played wins the pot. A poker hand comprises five cards; in variants where a player has more than five cards available to them, only the best five-card combination counts. There are 10 different kinds of poker hands, such as straight flush and four of a kind.

Variants [ edit ]

2006 WSOP Main

Event table

Poker has many variations,<sup>[7][8]</sup> all following a similar pattern of play<sup>[9]</sup>

and generally using the same hand ranking hierarchy. There are four main families of variants, largely grouped by the protocol of card-dealing and betting:

**Straight A**

A complete hand is dealt to each player, and players bet in one round, with raising and re-raising allowed. This is the oldest poker family; the root of the game as now played was a game known as Primero, which evolved into the game three-card brag, a very popular gentleman's game around the time of the American Revolutionary War and still enjoyed in the U.K. today. Straight hands of five cards are sometimes used as a final showdown, but poker is almost always played in a more complex form to allow for additional strategy. Stud poker Cards are dealt in a prearranged combination of face-down and face-up rounds, or streets, with a round of betting following each. This is the next-oldest family; as poker progressed from three to five-card hands, they were often dealt one card at a time, either face-down or face-up, with a betting round between each. The most popular stud variant today, seven-card stud, deals two extra cards to each player (three face-down, four face-up) from which they must make the best possible 5-card hand.

**Draw poker** Five-card draw: A complete hand is dealt to each

player, face-down. Then each player must place an ante to the pot. They can then see their cards and bet accordingly. After betting, players can discard up to three cards and take new ones from the top of the deck. Then, another round of betting takes place. Finally, each player must show their cards and the player with the best hand wins.

**Community card poker** Also known as "flop poker," community card poker is a variation of stud poker. Players are dealt an incomplete hand of face-down cards, and then a number of face-up community cards are dealt to the center of the table, each of which can be used by one or more of the players to make a 5-card hand. Texas hold 'em and Omaha are two well-known variants of the community card family.

There are several

methods for defining the structure of betting during a hand of poker. The three most common structures are known as "fixed-limit," "pot-limit," and "no-limit." In fixed-limit poker, betting and raising must be done by standardized amounts. For instance, if the required bet is X, an initial bettor may only bet X; if a player wishes to raise a bet, they may only raise by X. In pot-limit poker, a player may bet or raise any amount up to the size of the pot. When calculating the maximum raise allowed, all previous bets and calls, including the intending raiser's call, are first added to the pot. The raiser may then raise the previous bet by the full amount of the pot. In no-limit poker, a player may wager their entire betting stack at any point that they are allowed to make a bet. In all games, if a player does not have enough betting

chips to fully match a bet, they may go "all-in," allowing them to show down their hand for the number of chips they have remaining.

While typical poker games award the pot to

the highest hand as per the standard ranking of poker hands, there are variations where the best hand, and thus the hand awarded the pot, is the lowest-ranked hand instead. In such games the best hand contains the lowest cards rather than the highest cards; some variations may be further complicated by whether or not hands such as flushes and straights are considered in the hand rankings. There are also games where the highest and lowest hands divide the pot between them, known as "high low split" games.

Other

games that use poker hand rankings may likewise be referred to as poker. Video poker is a single-player video game that functions much like a slot machine; most video poker machines play draw poker, where the player bets, a hand is dealt, and the player can discard and replace cards. Payout is dependent on the hand resulting after the draw and the player's initial bet.

Strip poker is a traditional poker variation where players

remove clothing when they lose bets. Since it depends only on the basic mechanic of betting in rounds, strip poker can be played with any form of poker; however, it is usually based on simple variants with few betting rounds, like five card draw.

Another

game with the poker name, but with a vastly different mode of play, is called Acey-Deucey or Red Dog poker. This game is more similar to Blackjack in its layout and betting; each player bets against the house, and then is dealt two cards. For the player to win, the third card dealt (after an opportunity to raise the bet) must have a value in-between the first two. Payout is based on the odds that this is possible, based on the difference in values of the first two cards. Other poker-like games played at casinos against the house include three card poker and pai gow poker.

Computer

programs [ edit ]

A variety of computer poker players have been developed by

researchers at the University of Alberta, Carnegie Mellon University, and the University of Auckland amongst others.

In a January 2024 article<sup>[10]</sup> published in

Science, a group of researchers mostly from the University of Alberta announced that they "essentially weakly solved" heads-up limit Texas Hold 'em with their development of their Cepheus poker bot. The authors claimed that Cepheus would lose at most 0.001 big blinds per game on average against its worst-case opponent, and the strategy is thus so "close to optimal" that "it can't be beaten with statistical significance within a lifetime of human poker playing."<sup>[11]</sup>

# **Julian Assange no puede ser extraditado de inmediato a los EE.UU.**

Julian Assange no puede ser extraditado de inmediato a los Estados Unidos por cargos de espionaje, en una victoria parcial para el fundador de WikiLeaks.

Dos jueces de la Corte Suprema dictaminaron que se le concederá a Assange una nueva apelación a menos que las autoridades estadounidenses brinden garantías adicionales sobre lo que le sucederá. La decisión significa que el largo proceso legal, que ha durado más de una década, continuará.

El caso ha sido aplazado hasta mayo de 2024.

Los jueces Victoria Sharp y Jeremy Johnson dijeron que, si no se presentan garantías por parte de los EE.UU., concederán a Assange permiso para apelar la extradición por motivos que incluyen la violación de la libertad de expresión y la posibilidad de recibir la pena de muerte.

Si no se presentan garantías, dijeron, otorgarán el permiso de apelación sin una audiencia adicional. Si se presentan garantías, se dará a las partes la oportunidad de presentar alegatos adicionales antes de decidir sobre la solicitud de permiso de apelación.

## **Defensa de la libertad de expresión**

La Corte Suprema rechazó seis de los nueve argumentos de apelación de Assange, pero dijo que otorgaría apelación en tres temas: libertad de expresión, su afirmación de que enfrenta desventajas porque no es ciudadano estadounidense, y el riesgo de que reciba la pena de muerte.

Assange, un especialista en informática australiano, ha estado encarcelado en una prisión de alta seguridad en el Reino Unido durante los últimos cinco años. Ha estado luchando contra la extradición a los EE.UU. durante más de una década, incluidos siete años en la embajada ecuatoriana en Londres.

Si es declarado culpable, los abogados de Assange dicen que podría recibir una sentencia de cárcel de hasta 175 años, aunque las autoridades estadounidenses han dicho que es probable que cualquier sentencia sea significativamente menor.
